

2nd Navigating Knowledge Landscapes' International Conference

Health and Bioethics in the Digital Society

Zagreb, December 6th, 2018

The new conditions posed by the digital society include the on-line overload of information, complex multi-directed communications, and extreme social potency. In addition, the accumulation and distribution of knowledge, by experts and lay people, are interwoven with economic relations, legal and administrative regulations. How the emerging digital society would relate to the health and bioethics represents one of the major challenges to be addressed at this conference.
