## 1. SUMMARY

WP2 of the A4L\_ACTIONS project is dedicated to developing recognition and trust toward research performed in Central and Eastern Europe (CEE). The first task set out towards achieving this aim was performing bibliometric and grants analysis of Life Science research institutions and individuals in CEE countries in order to map out the pockets of excellence in CEE.

Data about holders of excellent grants in junior and senior categories were gathered by members of Alliance4Life's *Focus Group 4 – Grants and Funding Strategies* coordinated by FNUSA-ICRC. It provided crucial information about not only the landscape of pockets of excellence in Life Sciences across Central and Eastern Europe but also about how research and scientific excellence are perceived, defined and supported by funding instruments in each country covered by the survey.

The bibliometric desk research was performed centrally by CEITEC MU and was based on Web of Science (WoS) database. The WoS has provided us with indicators allowing us to distinguish researchers who made significant contributions to their fields throughout their careers (the Most Cited) and those whose results reverberated across the scientific community recently (the Hot Papers).

The resulting database of both established and upcoming excellent researchers in Life Sciences in CEE will subsequently serve as a highly objective and accurate tool for inviting the most relevant participants of A4L Mini-Conferences (Task 2.2), allowing them to exchange their expertise and initiate joint project ideas.

## 2. Grants analysis (Petr Rychtecký, FNUSA-ICRC)

The excellence mapping process consisted of the two-step Grants Analysis, and Bibliometric Analysis.

The mapping of excellence through grants in A4L countries was done in two steps:

1. Mapping of grant schemes aimed at support of excellence in each particular country
2. Compiling the list of grant holders in selected grant schemes.

### MAPPING OF GRANT SCHEMES AIMED AT SUPPORTING EXCELLENCE

For the first step, the following criteria were suggested for discussion between country representatives as to what constitutes support of excellence to establish a common benchmark for mechanisms that support excellence:

1. **Who evaluates the proposals?** Local / national evaluators or international (EU, global) experts? – non-national evaluation, at least on some level, ensuring objectivity and quality.

The expectation and aspiration specifically stated in national programme conditions are not always achieved (most commonly, the boards of evaluators include non-nationals among the experts).

2. **What is the duration of the grants?** (We prefer to map grants with duration close to ERC – 5 years) - preferably 3-5 years, 3 years considered as the minimum duration. The duration of projects varies and is expressed in months from 24 to 36. Typically, grants may be extended to the point of reaching the 5-year threshold.
3. **What is the financial allocation per project?** (We consider at least 200 000 EUR per year as indicator of financial prestige) – smaller allocations were also possible, ERC allocation per year was treated as benchmark only.
4. **What is the reputation of the grants?** - among scientific community, the grant scheme needs to be viewed as merit-based, fairly evaluated and the successful applicants held in high regard.

During online discussions, a significant difference was discovered in way how the excellence is viewed and supported in various countries. The suggested criteria had to be softened in order to obtain a relevant benchmark.

In the second step, information about grant holders was collected and ERC holders for each country were added. During the process, only life sciences grant holders were primarily targeted, but in some cases as for border research topics, it is possible that some of the grant holders could also be from different domains.

As mentioned, the grant schemes in various countries are not fully comparable, however they reflect somehow the excellence as perceived in each country.

With results obtained from 10 responding countries (Czech, Slovakia, Slovenia, Poland, Lithuania, Latvia, Estonia, Croatia, Bulgaria and Romania – Hungary did not provide the input), the following types of excellence-supporting grants were distinguished:

1. ERC grants
2. National support to Seal of Excellence holders
3. Dedicated support to researchers according to their maturity (ESRs – teambuilding; experienced researchers)
4. Other (distinguishing between the basic/frontier and applied research).

#### **COMPILING THE LIST OF GRANT HOLDERS IN SELECTED GRANT SCHEMES.**

1. The total number of grant holders identified is 649 individuals, with 29 persons awarded with ERC grants (including 17 Starting Grants, 5 Consolidator, 5 Advanced, 1 Proff of Concept and 1 Synergy Grant).
2. A significant difference was discovered in the way how the excellence is viewed and supported in various countries. As a result, the suggested criteria had to be softened in terms of grant duration and financing in order to obtain results reflecting the divergent definition of conditions for boosting scientific excellence.
3. Information about **grant holders** was collected, including their reference identifiers (ORCID, or, alternatively, SCOPUS ID) for each country was added. During the entire process, only life science grant holders were primarily targeted, but in some cases, such as border research topics, it is possible that some of the grant holders could also be from different domains.
4. Conclusion: **national grant schemes are not fully comparable, but they reflect the excellence as it is perceived in each country.**

The complete map of grant schemes and list of grant holders is presented in Annex 1 to this report.

### 3. Bibliometric analysis (Pavla Foltynová, CEITEC MU)

The bibliometric analysis was performed by InCites database (Clarivate) using the following indicators:

- Research area 1 Clinical & Life Sciences according to schema Citation Topics
- At least 3 publications in 2015-2020 as the corresponding author
- Category Normalized Citation Impact higher than 1
- Citation Impact higher than 10

The results of the bibliometric analysis could be distorted by the incomplete information of corresponding authorships in the Web of Science database (Clarivate), multiple affiliations, different variants of names including change of surname of married female researchers, the assignment to research area not included in 1 Clinical & Life Sciences, etc. All these factors could result in not including the excellent researchers in this list. The researchers with excellent non-bibliometric outputs, such as applied results, could not be recognized by this bibliometric analysis and therefore are not included in the list.

Preliminary results of the analysis were submitted to representatives participating in the A4L\_ACTIONS project for revision, completion, or additional comments.

In total, the bibliometric analysis has resulted in the selection of **1739** researchers from **11** CEE countries.

The complete list of researchers meeting the criteria of scientific excellence is presented in Annex 1 to this report.
